Gross profit for the month of December 2025 was \$25,552, a decrease of 24.9% from November 2025's gross profit of \$34,020. December 2025's gross profit of \$25,552 was less than the average monthly gross profit for the financial year of \$65,441 per month. Current financial year to date gross profit at the end of December 2025 is \$785,292, a decrease of 13.5% from the prior financial year to date gross profit at the end of December 31 2024 of \$907,484.

Gross Margin

Gross margin for the month of December 2025 was 58.2%, a decrease of 39.1% from November 2025's gross margin of 97.3%. Current financial year to date gross margin at the end of December 2025 is 91.8%, a decrease of 2.1% from the prior financial year to date gross margin at the end of December 31 2024.

Net Profit

Net profit for the month of December 2025 was (\$174,993), a decrease of > 999% from November 2025's net profit of \$19,092. December 2025's net profit of (\$174,993) was less than the average monthly net profit for the financial year of \$18,318 per month. Current financial year to date net profit at the end of December 2025 is \$219,812, an increase of 12.5% from the prior financial year to date net profit at the end of December 31 2024 of \$195,370.

Net Margin

Net margin for the month of December 2025 was -398.6%, a decrease of 453.2% from November 2025's net margin of 54.6%. Current financial year to date net margin at the end of December 2025 is 25.7%, an increase of 5.5% from the prior financial year to date net margin at the end of December 31 2024 of 20.2%.

Key Figures

Revenue - Monthly

\$43.9k

Revenue for the month of December 2025 was \$43,900, **an increase of 25.6%** from the month of November 2025's revenue of \$34,950.

Revenue - YTD (FY)

\$855.3k

Revenue for the financial year (YTD) of December 31 2025 was \$855,312, **a decrease of 11.5%** from the financial year (YTD) of December 31 2024's revenue of \$966,720.

Expenses - Monthly

\$200.5k

Expenses for the month of December 2025 was \$200,545, **an increase of > 999%** from the month of November 2025's expenses of \$14,928.

Expenses - YTD (FY)

\$565.5k

Expenses for the financial year (YTD) of December 31 2025 was \$565,480, **a decrease of 20.6%** from the financial year (YTD) of December 31 2024's expenses of \$712,456.

Operating Expense Ratio - Monthly

456.8%

Operating expense ratio for the month of December 2025 was 456.8%, **an increase of 414.1%** from the month of November 2025's operating expense ratio of 42.7%.

Operating Expense Ratio - YTD (FY)

66.1%

Operating expense ratio for the financial year (YTD) of December 31 2025 was 66.1%, **a decrease of -7.6%** from the financial year (YTD) of December 31 2024's operating expense ratio of 73.7%.

Net Margin - Monthly

-398.6%

Net margin for the month of December 2025 was -398.6%, **a decrease of -453.2%** from the month of November 2025's net margin of 54.6%.

Net Margin - YTD (FY)

25.7%

Net margin for the financial year (YTD) of December 31 2025 was 25.7%, **an increase of 5.5%** from the financial year (YTD) of December 31 2024's net margin of 20.2%.

Financial Health

December 01 2025 - December 31 2025 vs November 01 2025 - November 30 2025

Break-Even

December 01 2025 - December 31 2025

	Break-Even Point	\$344.5k
	Revenue	\$43.9k
	Operating Costs	\$218.9k
	Variable Costs	\$18.3k
	Fixed Costs	\$200.5k
	Operating Loss	(\$175k)

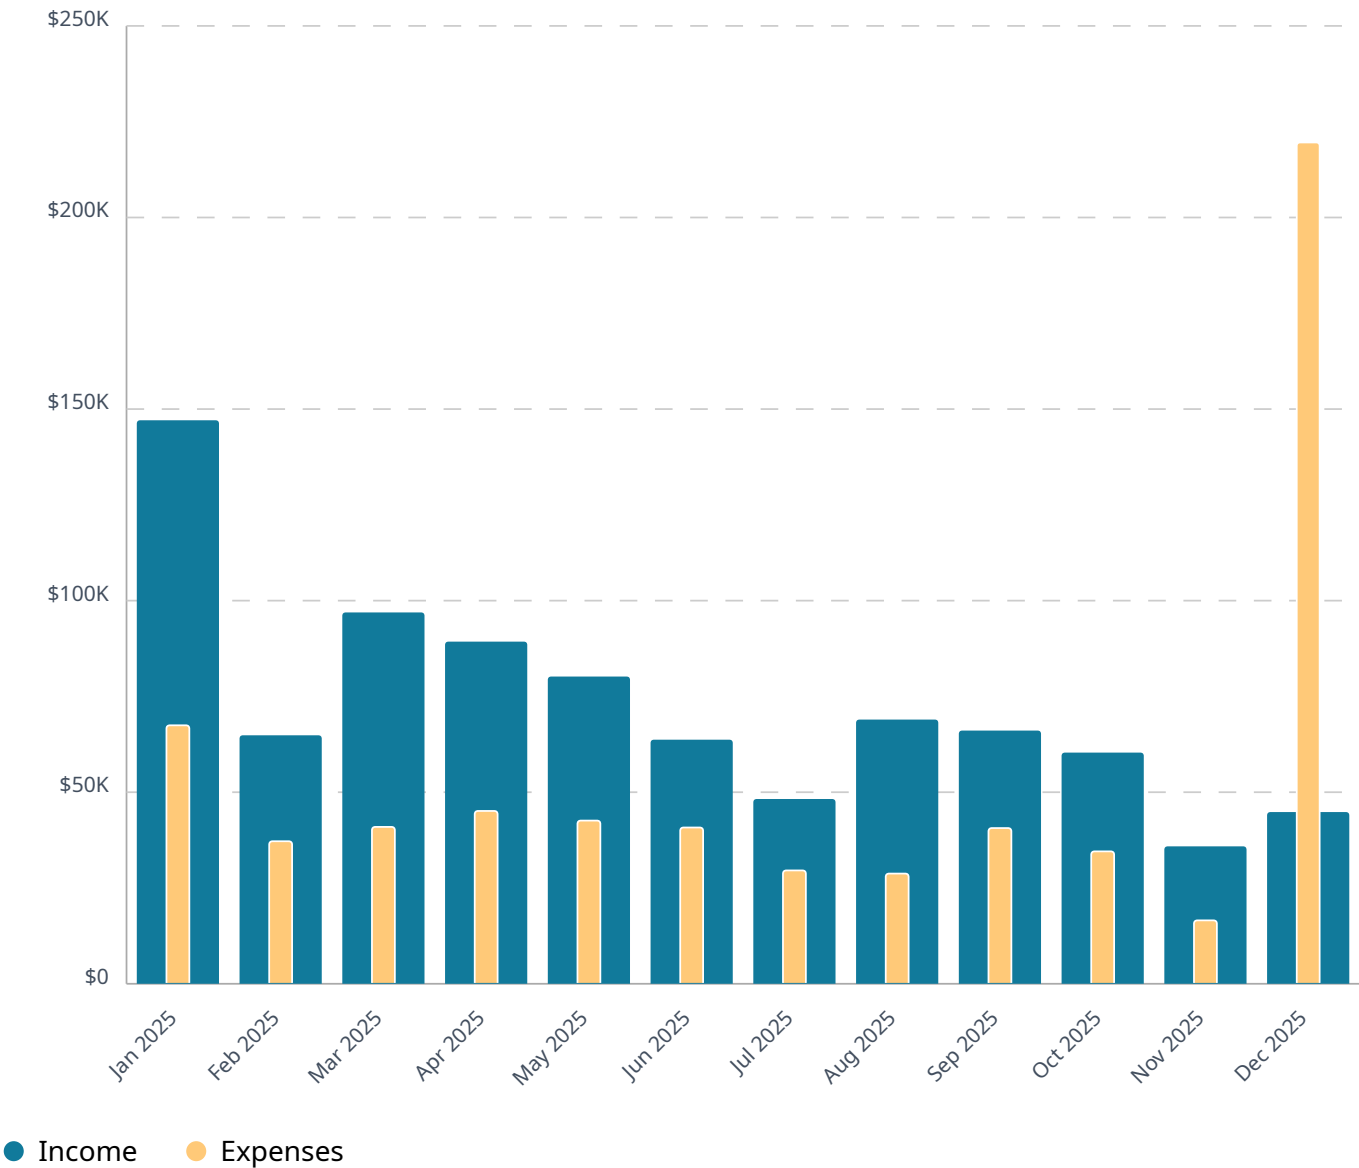

Graph Insights

The break-even point for the entity for the period of December 01 2025 to December 31 2025 was \$344.5k. The break-even point indicates the revenue at which the operating costs of the business are fully covered, any additional revenue past this point results in operating profit for the entity.

For the period of December 01 2025 to December 31 2025, FORMICA PC achieved a revenue of \$43.9k with operating costs of \$218.9k. This resulted in an operating loss of (\$175k).

Income Vs. Expenses

January 01 2025 - December 31 2025

Graph Insights

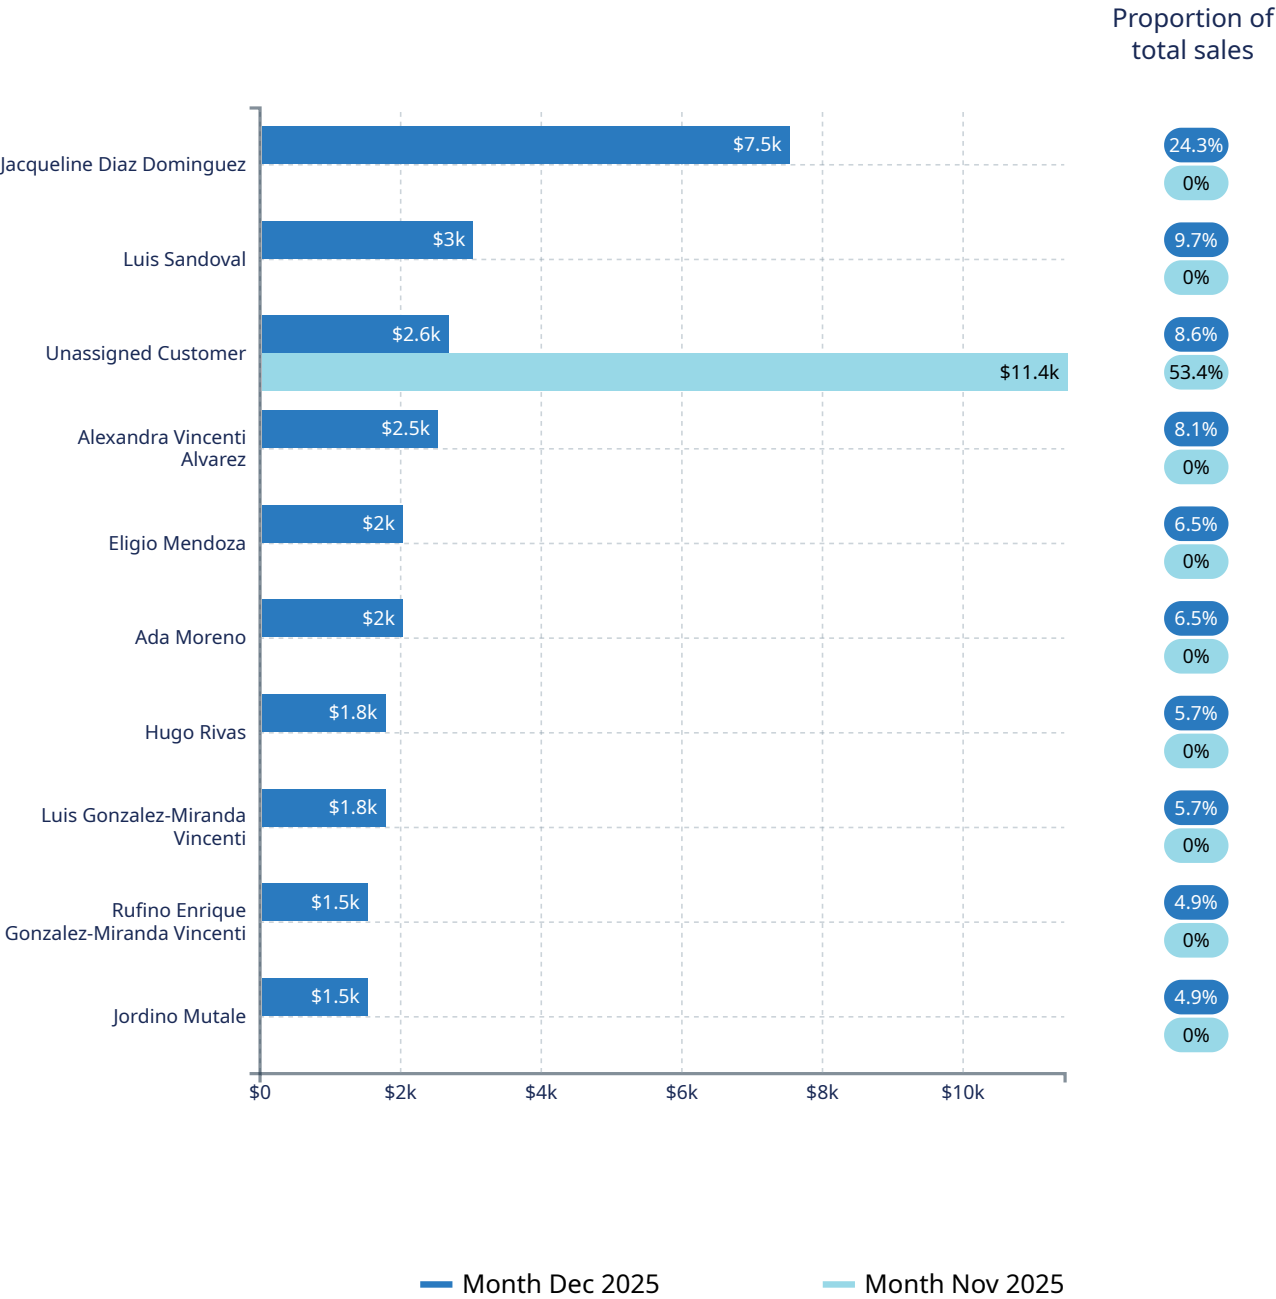

Income for the period January 2025 to December 2025 was \$855.3k. Average income per month was \$71.3k. The best performing month was January 2025 (income of \$146.2k) while the worst performing month was November 2025 (income of \$35k).

Expenses for the period January 2025 to December 2025 were \$635.5k. Average expenses per month were \$53k. The most expenses were incurred in December 2025 (expenses of \$218.9k) while the least expenses were incurred in November 2025 (expenses of \$15.9k).

Profit for the period January 2025 to December 2025 was \$219.8k. Average profit per month was \$18.3k. The best performing month was January 2025 (profit of \$79.4k).

Legal Income

December 01 2025 - December 31 2025 vs November 01 2025 - November 30 2025

Graph Insights

The top customer by sales for the month of December 2025 was Jacqueline Diaz Dominguez. Jacqueline Diaz Dominguez accounts for 24.3% of sales (up versus 0.0% in November 2025). The top 3 clients account for 42.6% of total sales (down versus 53.4% in November 2025). Unassigned Customer exhibited the largest change in proportion of sales from 53.4% in November 2025 to 8.6% in December 2025.

KPI explanations

Profitability

Gross Profit Margin: $\text{Gross Profit} / \text{Revenue (COA)}$

$$\$25,552 / \$43,900 = 58.2\%$$

The gross profit margin ratio represents the amount of profit that an entity retains after incurring the direct costs associated with producing and selling its goods or services. The higher the ratio, the more the entity retains to service its other costs and debt obligations.

Operating Expense Ratio: $(\text{Total Expenses} - \text{Amortisation} - \text{Depreciation (COA)} - \text{Interest Expense}) / \text{Revenue (COA)}$

$$(\$200,545 - \$0 - \$0 - \$0) / \$43,900 = 456.8\%$$

The operating expense ratio represents the efficiency of an entity's management by comparing operating expenses to sales. The ratio illustrates how efficient an entity's management is at keeping costs low while generating sales. More efficient entities have lower ratios.

Net Profit Margin: $\text{Net Income After Tax} / \text{Total Income}$

$$(\$174,993) / \$43,900 = -398.6\%$$

The net profit margin ratio represents the amount of profit that an entity retains after incurring all costs. The higher the ratio, the more profit is generated per each unit of sales.

Interest Cover: $(\text{Net Income Before Tax} + \text{Interest Expense}) / \text{Interest Expense}$

$$((\$174,993) + \$0) / \$0 = \text{N/A}$$

The interest cover ratio is used to determine how easily an entity can pay interest on its outstanding debt. The higher the ratio, the more capable an entity is of paying its interest repayments.

Liquidity

Current Ratio: $\text{Total Current Assets} / \text{abs}(\text{Total Current Liabilities})$

$$(\$17,207) / \text{abs}(\$193,250) = -0.09$$

The current ratio represents an entity's ability to pay short-term obligations (those due within one year). Lenders, investors, and creditors often use this ratio to understand how an entity can maximize the current assets on its balance sheet to satisfy its current debt and other payables.

Quick Ratio: $(\text{Cash \& Cash Equivalents (COA)} + \text{Accounts Receivable (COA)}) / \text{abs}(\text{Total Current Liabilities})$

$$((\$17,207) + \$0) / \text{abs}(\$193,250) = -0.09$$

The quick ratio represents an entity's ability to pay short-term obligations (those due within one year) using its most liquid assets. The most liquid assets are assets that can be converted quickly to cash. The quick ratio is also known as the acid test ratio.

Debtors Days: $((\text{prior Accounts Receivable (COA)}/2 + \text{Accounts Receivable (COA)}/2) / \text{Revenue (COA)}) * \text{Number of Days in Period}$

$$((\$0/2 + \$0/2) / \$43,900) * 31.0 \text{ days} = 0.0 \text{ days}$$

The debtor days ratio indicates the average number of days that an entity takes to collect its receivables or money owed to it by clients. The ratio demonstrates how effective an entity manages the credit it extends to customers and how quickly that short-term debt is collected. The lower the ratio, the faster the entity receives money from its debtors.

Creditors Days: $((\text{prior Accounts Payable (COA)}/2 + \text{Accounts Payable (COA)}/2) / (\text{Total Cost of Goods Sold} + \text{Total Expenses})) * \text{Number of Days in Period}$

$$((\$0/2 + \$0/2) / (\$18,348 + \$200,545)) * 31.0 \text{ days} = 0.0 \text{ days}$$

The creditor days ratio indicates the average number of days that an entity takes to pay its bills, invoices and expenses to suppliers, vendors and employees. A higher ratio indicates that the entity takes longer to pay its bills and expenses which means that it retains the available funds for a longer duration. A higher ratio may allow the entity an opportunity to utilize the available cash in a better way to maximize return.

Inventory Days: $((\text{prior Inventory}/2 + \text{Inventory}/2) / \text{Total Cost of Goods Sold}) * \text{Number of Days in Period}$

$$((\$0/2 + \$0/2) / \$18,348) * 31.0 \text{ days} = 0.0 \text{ days}$$

The inventory days ratio indicates the average number of days that an item of inventory is held in stock. The lower the ratio, the faster an entity sells its inventory.

Solvency

Debt to Equity: $(\text{Total Current Liabilities} + \text{Total Long-Term Liabilities}) / \text{Total Equity}$

$$(\$193,250 + \$0) / (\$210,457) = -0.92$$

The debt to equity ratio represents an entity's financial leverage. The ratio is a measure of the degree to which an entity is financing its operations through debt versus wholly owned funds. A lower ratio reflects the ability of shareholder equity to cover all outstanding debts.

Du Pont Analysis

Operating Efficiency: $\text{Net Income After Tax} / \text{Total Income}$

$$(\$174,993) / \$43,900 = -398.6\%$$

The operating efficiency ratio is identical to the net margin ratio and represents the amount of profit that an entity retains after incurring all costs. The higher the ratio, the more profit is generated per each unit of sales.

Asset Use Efficiency: $\text{Total Income} / ((\text{prior Total Current Assets} + \text{prior Total Fixed Assets})/2 + (\text{Total Current Assets} + \text{Total Fixed Assets})/2)$

$$\$43,900 / (((\$5,320) + \$0)/2 + ((\$17,207) + \$0)/2) = -389.8\%$$

The asset use efficiency ratio is used to demonstrate how effective an entity is at utilizing its assets to generate sales. The higher the ratio, the lower the quantum of assets required to generate sales.

Financial Leverage: $((\text{prior Total Current Assets} + \text{prior Total Fixed Assets})/2 + (\text{Total Current Assets} + \text{Total Fixed Assets})/2) / \text{abs}(\text{prior Total Equity}/2 + \text{Total Equity}/2)$

$$(((\$5,320) + \$0)/2 + ((\$17,207) + \$0)/2) / \text{abs}((\$119,099)/2 + (\$210,457)/2) = -0.07$$

The financial leverage ratio demonstrates how much debt the entity has utilized to finance its business. The higher the ratio, the more debt the entity is using in its funding structure.

Return on Equity: $\text{Net Income After Tax} / \text{abs}(\text{prior Total Equity}/2 + \text{Total Equity}/2)$

$$(\$174,993) / \text{abs}((\$119,099)/2 + (\$210,457)/2) = -106.2\%$$

The return on equity ratio is considered a measure of how effectively management is using an entity's assets, leverage and expenses to create profits for shareholders. ROE can be increased by improving operating efficiency, asset use efficiency or by increasing financing leverage via more debt funding.
